GENERAL DESCRIPTION

The Am71/81LS95, Am71/81LS96, Am71/81LS97 and Am71/81LS98 are octal buffers fabricated using Advanced Low-Power Schottky technology. The 20-pin package provides improved printed circuit board density for use in memory address and clock driver applications.

The Am71/81LS95 and Am71/81LS97 present true data at the outputs, while the Am71/81LS96 and Am71/81LS98 are inverting. The Am71/81LS95 and Am71/81LS96 have a common enable for all eight buffers with access through a 2-input NOR gate. The Am71/81LS97 and Am71/81LS98 octal buffers have four buffers enabled from one common line, and the other four buffers enabled from another common line. In all cases the outputs are placed in the three-state condition by applying a high logic level to the enable pins. All parts feature low current PNP inputs.
